

HIV TREATMENT WORKS

**WHEN TAKEN AS PRESCRIBED, HIV MEDICATION
ALLOWS THE IMMUNE SYSTEM TO RECOVER!**

- HIV treatment, called antiretroviral therapy (ART), allows people living with HIV to live long and healthy lives.
- Right now, HIV treatment is lifelong, but for many people it means taking one pill per day with few or no side effects.
- Importantly, taking HIV medication as directed can **PREVENT** transmission of HIV to others!

INSURANCE COVERS THE COST OF HIV TREATMENT

- Resources are available if you are uninsured!

**ART IS RECOMMENDED FOR ALL
PEOPLE LIVING WITH HIV**
