

# PREVENT HIV!

HIV can be transmitted by blood, semen, rectal fluids, vaginal secretions & breast milk

Both female (internal) and male (external) condoms can prevent HIV!

Use sterile needles and works **EVERY TIME**

Pregnant people should get tested for HIV and treated if they're positive

# PREVENT HIV

*with these medications!*

PrEP can prevent HIV *before* an exposure happens!

PEP can prevent HIV up to 72 hours *after* an exposure
